Analyzing data for a set of data related to the salaries of a company, institution or a particular region requires accuracy in data collection, and therefore we need a base that contains correct data to deal with it easily.

Introduction

Dataset Description

This data is an understanding of how the government of Francisco operates, who employs them, and what jobs have the highest employees. This data contains the names, job titles, compensation, and total salaries of San Francisco City employees on an annual basis from 2011 to 2014.
